

What can I do to conserve water?

There are many things you can do to conserve water. Running your clothes washer and dishwasher only when they are full can save up to 1,000 gallons a month. Watering your lawn and garden in the morning or evening when temperatures are cooler will help minimize evaporation. Shortening your shower by a minute or two can save up to 150 gallons per month. Turning off the water while you are brushing your teeth can save up to 25 gallons per month. Also, take time to review your water bill on a regular basis as this can help you quickly realize if there are leaks in your system.

How much water do I use during a typical shower?

Based on the age of your house and your showerheads, anywhere from 20 to 40 gallons of water can be used during a typical shower.

Tap vs. Bottled, Rethinking What You Are Drinking

When choosing the water you want to drink, it is often easy to be convinced that bottled water is healthier for you than tap water, but in truth is it? The answer, thanks to a study by the Natural Resources Defense Council (NRDC) is not always. First, approximately 25 percent of bottled water is – in reality – bottled tap water. Additionally, the Food and Drug Administration (FDA) regulates bottled water; however, their testing standards are not as rigorous as the ones required by the US Environmental Protection Agency (EPA) for tap water. Moreover, FDA oversight does not apply to water that is packaged and sold within the same state. According to the

NRDC's report, this leaves approximately 60 -70 percent of bottled water, including the contents of watercooler jugs, free of FDA regulation.

P.O. Box 8
Holly Springs, NC 27540

Community Participation

You are invited to participate in our public forum and voice your concerns about your drinking water. The Holly Springs Town Council meets at 7 p.m. the first and third Tuesdays of every month. Meetings, which are open to the public, are held in the Council Chambers upstairs in Holly Springs Town Hall at 128 S. Main Street.

2020 Annual Drinking Water Quality Report

We routinely monitor for constituents in your drinking water according to Federal and State laws. The test results table shows the results of our monitoring for the period of January 1st to December 31st, 2020. In the table you might find terms and abbreviations you are not familiar with. To help you better understand these terms we've provided the following definitions:

Definitions

- **Action Level (AL)** – the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.
- **Action Level Goal (ALG)** – the level of a contaminant in drinking water below which there is no known or expected risk to health. ALGs allow for a margin of safety.
- **Avg.** – Regulatory compliance with some MCLs is based on running annual average of monthly samples.
- **Locational running annual average (LRAA)** – is the average of sample analytical results for samples taken at a particular monitoring location during the previous four calendar quarters.
- **Maximum Contaminant Level (MCL)** – the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology. Secondary MCLs are unenforceable guidelines for aesthetic quality of water.
- **Maximum Contaminant Level Goal (MCLG)** – the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.
- **Maximum Residual Disinfectant Level (MRDL)** – the highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.
- **Maximum Residual Disinfectant Level Goal (MRDLG)** – the level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
- **MRL** – minimum reporting level defined by EPA
- **mrem** – millirems per year (a measure of radiation absorbed by the body).
- **NA** – not applicable.
- **N** – no
- **ND** – not detected.
- **TT** – treatment technique
- **NTU** – Nephelometric Turbidity Units.
- **Parts per billion (ppb)** – micrograms per liter (µg/L) or one ounce in 7,800,000 gallons of water.
- **Parts per million (ppm)** – milligrams per liter (mg/L) or one ounce in 7,800 gallons of water.
- **SU** – standard unit

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

Microbiological Contaminants							
Substance (Unit of Measure)	Year Sampled	MCL	MCLG	Town of Holly Springs Your Water	Harnett County Your Water	Violation Yes/No	Likely Source of Contamination
Total Coliform Bacteria (presence or absence)	2020	Greater than 5% requires Level 1 Assessment	0	1.20%*	3%	No	Naturally present in the environment
Fecal Coliform or E. coli (presence or absence)	2020	0 ¹	0	0	0	No	Human and animal fecal waste

¹ Note: The MCL is exceeded if a routine sample and repeat sample are total coliform positive, and one is also fecal coliform or E. coli positive. Coliforms are bacteria that are naturally present in the environment and are used as an indicator that other, potentially harmful, waterborne pathogens may be present or that a potential pathway exists through which contamination may enter the drinking water distribution system.

* Six routine total coliform positive samples in 2020. 1 sample collected in each month of January, June, August, and September 2020 tested positive. Repeat results from each original, upstream, and downstream site were negative. In 2020, the Town of Holly Springs analyzed 498 samples for total and fecal coliforms.

Turbidity ²						
Substance (Unit of Measure)	Year Sampled	Treatment Technique (TT) Violation if:	Town of Holly Springs Amount Detected	Harnett County Amount Detected	TT Violation Yes/No	Likely Source of Contamination
Turbidity (NTU) – Highest single turbidity measurement	2020	Turbidity >1 NTU	N/A	0.04 NTU	No	Soil runoff
Turbidity (NTU) – Lowest monthly % of samples meeting turbidity limits	2020	Less than 95% of monthly turbidity measurements are <0.3 NTU	N/A	100%	No	

² Turbidity is a measure of the cloudiness of the water. We monitor it because it is a good indicator of the effectiveness of our filtration system. The turbidity rule requires that 95% or more of the monthly samples must be less than or equal to 0.3 NTU.

Total Organic Carbon (TOC) ³				Town of Holly Springs		Harnett County				
Substance (Unit of Measure)	Year Sampled	MCL	MCLG	Your Water	Range of Monthly Removal Ratio	Your Water	Range of Monthly Removal Ratio	Violation Yes/No	Likely Source of Contamination	Compliance Method
Total Organic Carbon (removal ratio)	2020	TT	NA	NA	NA	1.43	1.33-1.53	No	Naturally present in the environment	Step 1

³ Total Organic Carbon (TOC) has no health effect. The disinfectant can combine with TOC to form disinfection by-products. Disinfection is necessary to ensure that water does not have unacceptable levels of pathogens. By-products of disinfection include trihalomethanes (THM) and haloacetic acids (HAA), which are reported elsewhere in this report.

Inorganic Contaminants				Town of Holly Springs		Harnett County				
Substance (Unit of Measure)	Date Sampled	MCL	MCLG	Amount Detected	Range Low-High	Amount Detected	Range Low-High	Violation Yes/No	Likely Source of Contamination	
Fluoride (ppm)	1/9/20	4	4	NA	NA	0.75	NA	No	Erosion of natural deposits, water additive which promotes strong teeth, discharge from fertilizer and aluminum factories	

Disinfectants and Disinfection Byproducts Contaminants				Town of Holly Springs		Harnett County			
Substance (Unit of Measure)	Year Sampled	MCL [MRDL]	MCLG [MRDLG]	Highest LRAA	Range Low - High	Highest LRAA	Range Low - High	Violation Yes/No	Likely Source of Contamination
Total Trihalomethanes [TTHM] (ppb)	2020	80	NA	40	34-60	38.2	19.7-48.7	No	By-product of drinking water chlorination
Haloacetic Acids [HAA5] (ppb)	2020	60	NA	10	9.5-56	23.7	12.6-30.2	No	By-product of drinking water chlorination

				Town of Holly Springs		Harnett County			
Substance (Unit of Measure)	Year Sampled	MCL [MRDL]	MCLG [MRDLG]	Average	Range Low - High	Average	Range Low - High	Violation Yes/No	Likely Source of Contamination
Chloramines (ppm)	2020	[4]	[4]	2.79	0.31-3.60	2.85	1.10-4.50	No	Water additive to control microbes
Monochloramines (ppm)	2020	[4]	[4]	3.05	1.29-3.89	NA	NA	No	Water additive used to control microbes
Chlorine (free) (ppm)	2020	[4]	[4]	1.49	0.2-3.2	1.75*	0.20-2.90	No	Water additive used to control microbes
Chlorine Dioxide (ppb)	2020	800	800	NA	NA	22.0	0 - 237	No	Water additive used to control microbes
Chlorite (ppm) (Distribution)	2020	1	0.8	NA	NA	0.402	0.347-0.450	No	By-product of chlorine dioxide

* Only month of March.

Lead and Copper Contaminants			Town of Holly Springs			Harnett County				
Substance (Unit of Measure)	AL	MCLG	Year Sampled	Your Water	# of sites found above AL	Year Sampled	Your Water	# of sites found above AL	Violation Yes/No	Likely Source of Contamination
Copper (ppm) (90th percentile)	1.3	1.3	2020	0.051	0	2019	0.097	0	No	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
Lead (ppb) (90th percentile)	15	0	2020	ND	0	2019	ND	NA	No	Corrosion of household plumbing systems; erosion of natural deposits

Unregulated Secondary Contaminants ⁴			Town of Holly Springs		Harnett County		
Substance (Unit of Measure)	Year Sampled	Secondary MCL	Average	Range (Low-High)	Amount Detected	Range (Low-High)	Likely Source of Contamination
Ammonia (free) (ppm)	2020	NA	0.09	0 - 0.20	N/A	N/A	Disinfection treatment
pH	2020	6.5 to 8.5	8.4	7.3-9.1	7.6	N/A	Acidity of water
Sodium (ppm)	2020	NA	N/A	N/A	22.69	N/A	Leaching from natural deposits
Sulfate (ppm)	2020	250	N/A	N/A	44.1	N/A	Leaching from natural deposits

⁴ Secondary Contaminants, required by the NC Public Water Supply Section, are substances that affect the taste, odor, and/or color of drinking water. These aesthetic contaminants normally do not have any health effects and normally do not affect the safety of your water.

Unregulated Secondary Contaminants (UCMR4)		Town of Holly Springs		Harnett County	
Analyte	MRL	Your Water (Average)	Range (Low - High)	Your Water (Average)	Range (Low - High)
Bromochloroacetic Acid (ppb)	0.30	3.84	ND - 11.9	5.82	3.83 - 8.8
Bromodichloroacetic Acid (ppb)	0.50	1.72	ND - 4.8	4.49	3.66 - 5.42
Chlorodibromoacetic Acid (ppb)	0.30	1.14	ND - 3.5	2.74	0.568 - 4.45
Dibromoacetic Acid (ppb)	0.30	1.62	ND - 6.3	3.20	ND - 9.55
Dichloroacetic Acid (ppb)	0.20	5.74	ND - 23.3	7.47	3.15 - 20.9
HAA9 Group (ppb)	2.0	8.35	ND - 51.6	NA	NA
Total Brominated HAAs (ppb)	NA	4.06	ND - 16	NA	NA
Haloacetic Acids, Total (ppb)	NA	11.26	ND - 38.9	NA	NA
Monobromoacetic Acid (ppb)	0.30	0.21	ND - 0.88	0.59	ND - 1.18
Monochloroacetic Acid (ppb)	2.0	0.43	ND - 2.5	0.15	ND - 2.53
Tribromoacetic Acid (ppb)	2.0	0.22	ND - 1.4	1.17	ND - 5.46
Trichloroacetic Acid (ppb)	0.50	1.65	ND - 11.5	4.21	0.828 - 17.1
Manganese (ppb)	0.40	5.5	3.1 - 11.1	3.94	1.78 - 7.04
Bromide (ppb)	NA	ND	ND	120.03	48.1 - 222
Total Organic Carbon (ppb)	NA	ND	ND	5755	5360 - 6410

Unregulated contaminants are those for which EPA has not established drinking water standards. The purpose of unregulated contaminant monitoring is to assist EPA in determining the occurrence of unregulated contaminants in drinking water and whether future regulations are warranted.
